

The European national Chambers vaccinate 4,305 people as their contribution to the fight against Covid-19

Vaccination has been a hot topic all over the world. After a slow start, with massive efforts and several initiatives, Japan is getting closer to the 50% fully vaccinated mark.

The EBC would like to highlight the various vaccination initiatives taken by the European national Chambers of Commerce and European companies. In total, the European Chambers, via 7 national chambers, will have vaccinated **4,305 people**: 2,205 people in July and August, and an additional 2,100 are scheduled to get their first jab before mid-September. European companies, on the other hand, have already organised vaccinations for their employees and family.

The EBC would like to stress that **many nationalities, both staff of chamber member companies and their families**, have had the chance to get vaccinated.

Just as the Japanese Government believes that vaccination is important, so do the European national. **We stand ready to do our part, and we hope that all of us, by this action, can get closer to a world without COVID.**
